---

My hunch is that they either did not run a test with weathered bait or did not pass it. If the jacket does not provide the answer tomorrow, let me know. I'll check my reviews on Tuesday if need be, but Geri McCann did a lot of the Difenacoum stuff.

Bill,

- I believe that the short answer is that Woodstream did not send in an acceptable test for weathered blocks. If so, I will let them know that, for each label claim, they need one of these tests.
- I would like to reply no later than next Wed, Mar 17.

Thank You,

Daniel B. Peacock, Biologist

Subject: FW: Rodenticide Use in Sewers

---

Dear Mr. Peacock,  
I was wondering if you've had a chance yet to review my below question?

Best Regards,

Chad

**Subject:** Rodenticide Use in Sewers

Dear Mr. Peacock,

I hope all is well with you. I have a question that I was hoping would be easy for you to answer. I was asked the other day by one of our sales people why our Difenacoum block bait labels display a use restriction for sewers. My short answer to them is that it is on our label because it is on the latest agency accepted master label for the product (attached). However, the reason that the restriction is on the master label is not known to me. Can you explain the reasoning behind this? I am aware that this restriction is not on other block baits. Did Woodstream not provide data that was needed to support use of difenacoum blocks in sewers or did it have something to do with the active?

Thanks in advance for your time. I really appreciate it.

Sincerely,

Chad Mateer
